

# Demography, the Fiscal Gap and Social Security

Alan Auerbach

January 17, 2019

# Key Factors

- Unfunded Social Security systems
  - Younger workers must pay for older retirees

# Key Factors

- Unfunded Social Security systems
  - Younger workers must pay for older retirees
- Rising old-age dependency ratios (OADRs)
  - More young to pay for fewer old

# Key Factors

- Unfunded Social Security systems
  - Younger workers must pay for older retirees
- Rising old-age dependency ratios (OADRs)
  - More young to pay for fewer old
- Increasing share of adult years in retirement
  - Life expectancy growing much faster than retirement ages, so an even larger old-age population to support

# Key Factors

- Unfunded Social Security systems
  - Younger workers must pay for older retirees
- Rising old-age dependency ratios (OADRs)
  - More young to pay for fewer old
- Increasing share of adult years in retirement
  - Life expectancy growing much faster than retirement ages, so an even larger old-age population to support
- Together, contribute to growing gap between contribution inflows and payment outflows, for given tax and benefit rules

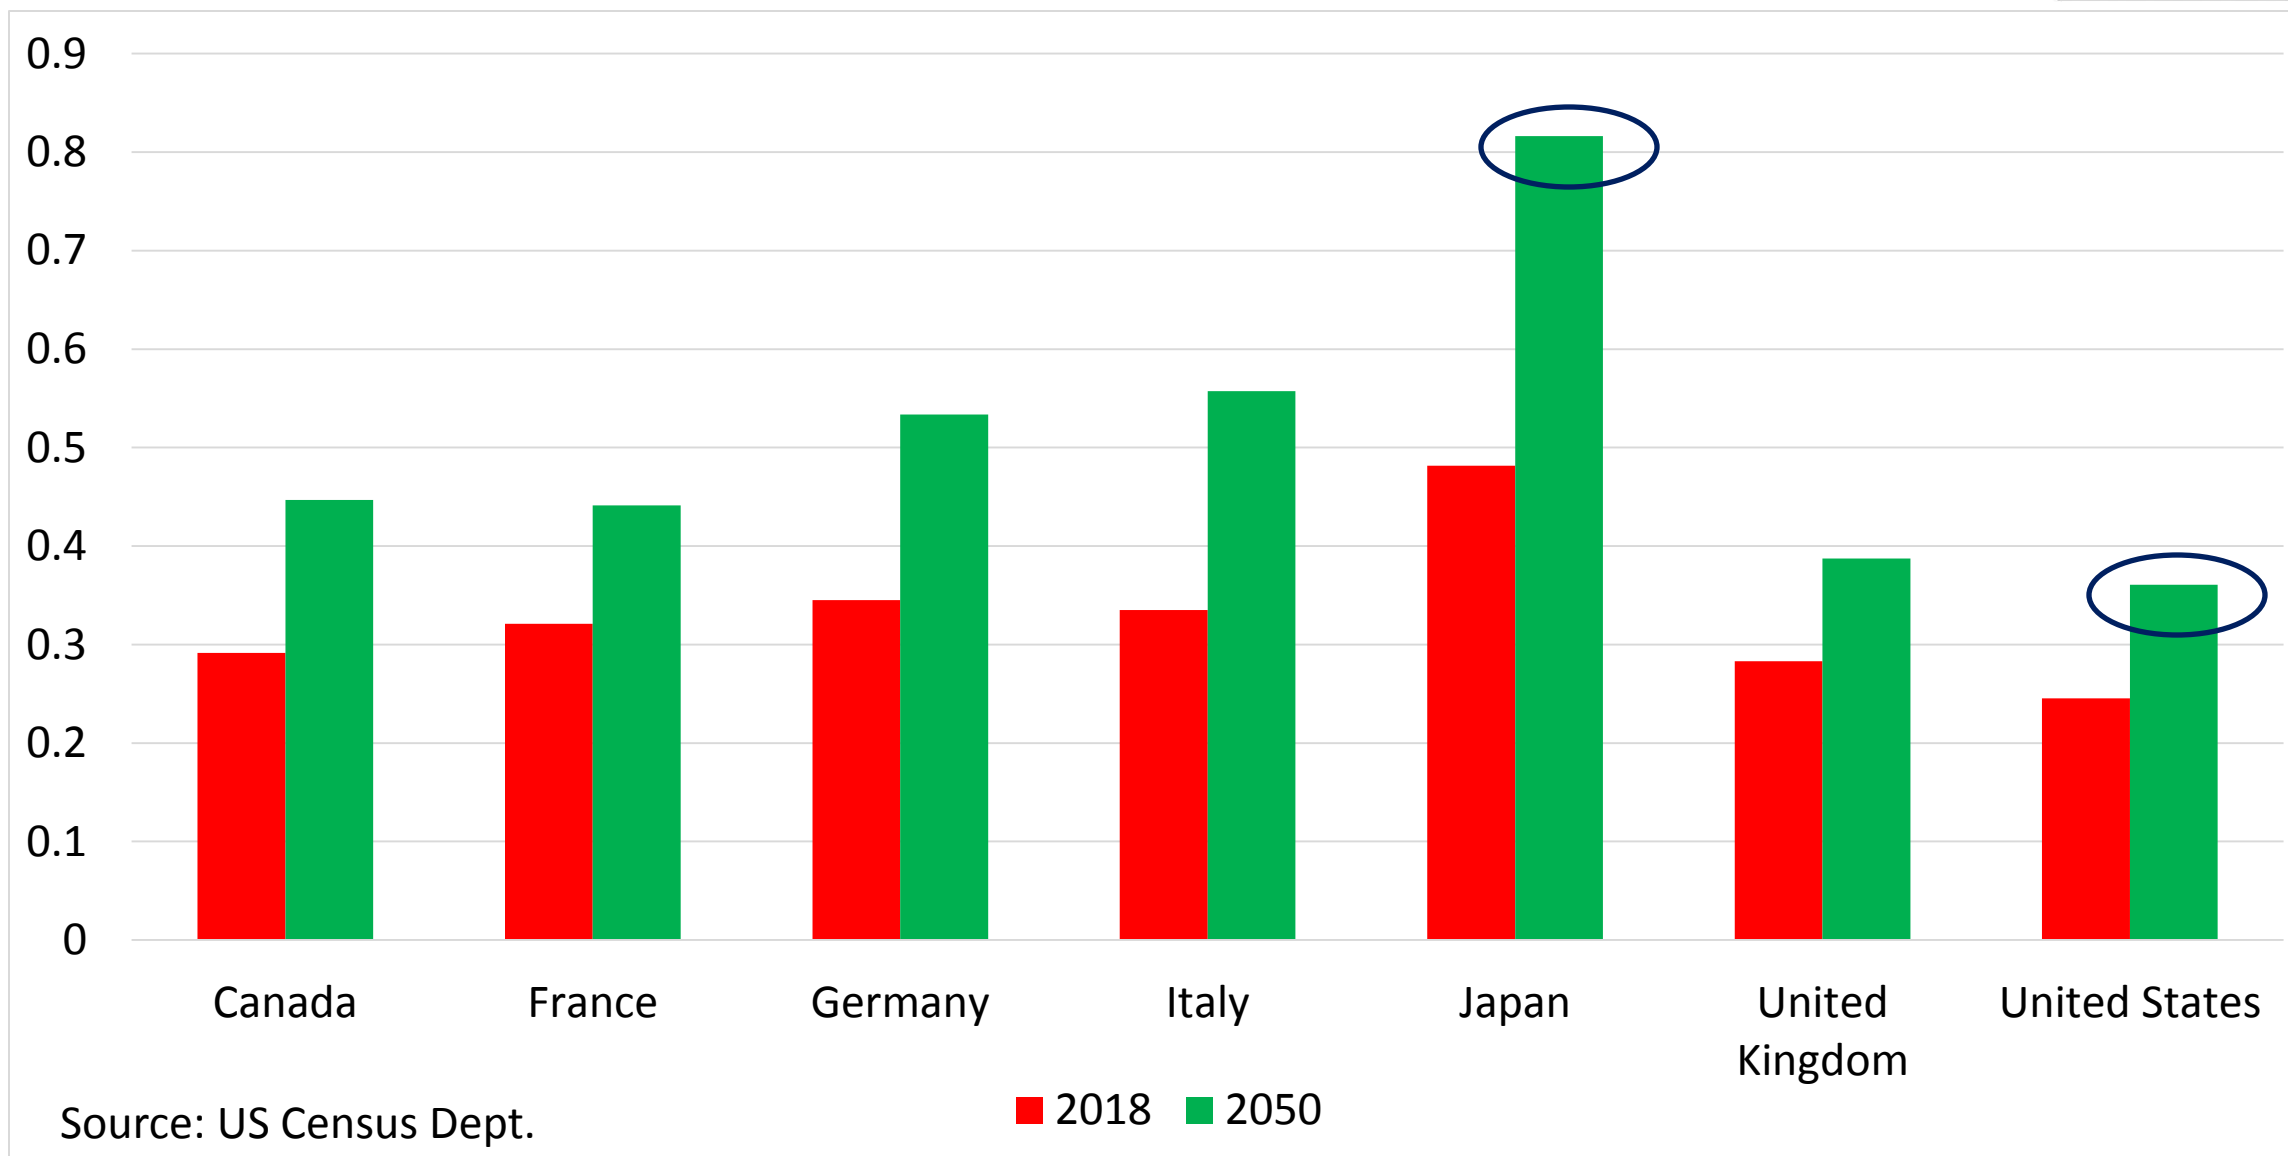

- A big problem in more developed countries, with large OADRs and generous Social Security programs

# G-7 Old-Age Dependency Ratios

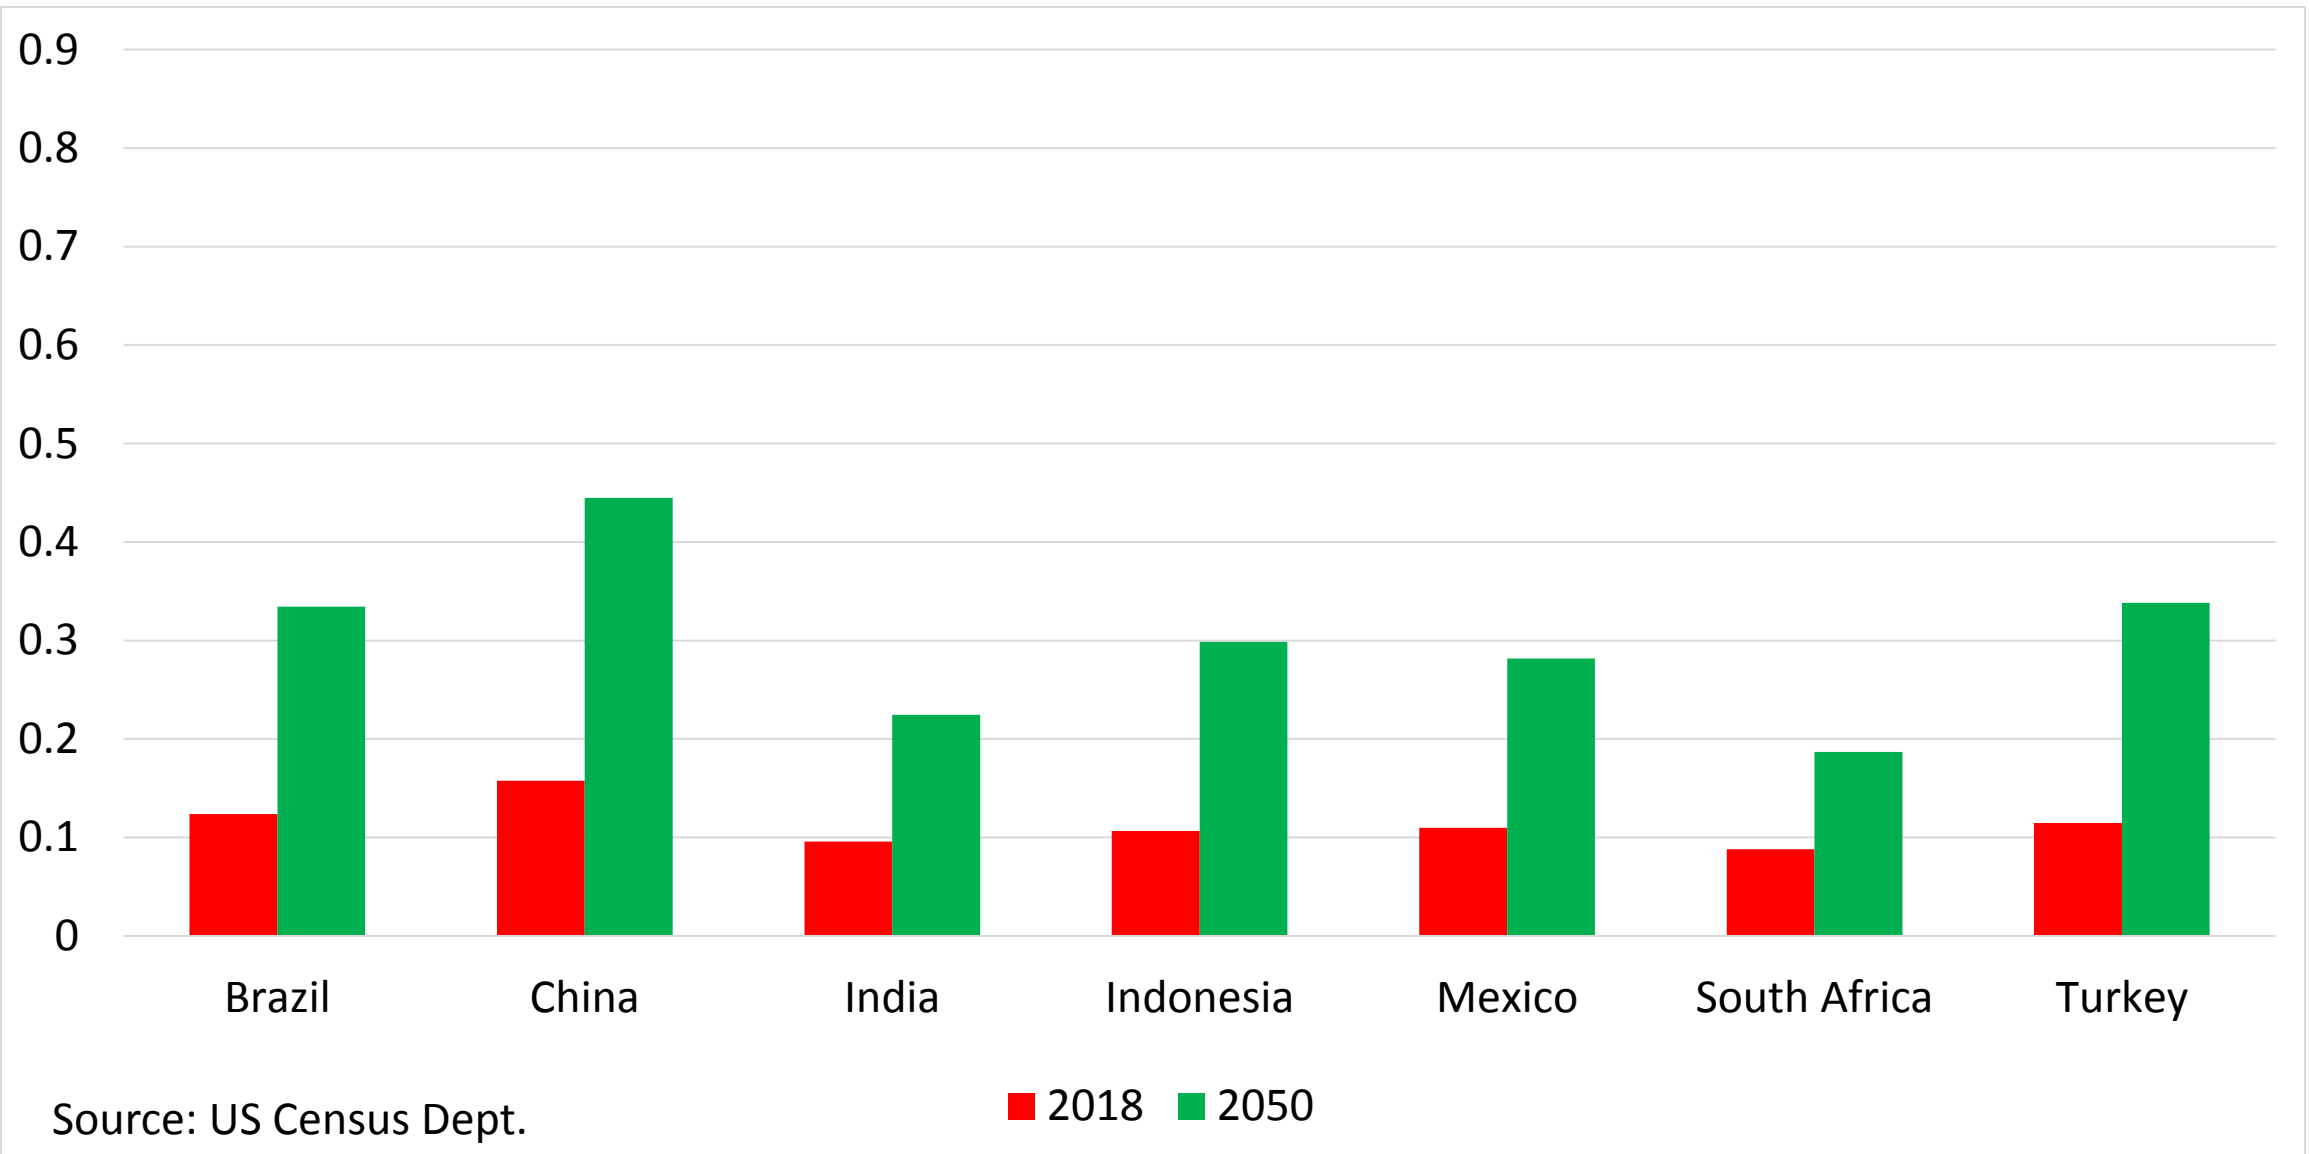

# G-7 Old-Age Dependency Ratios

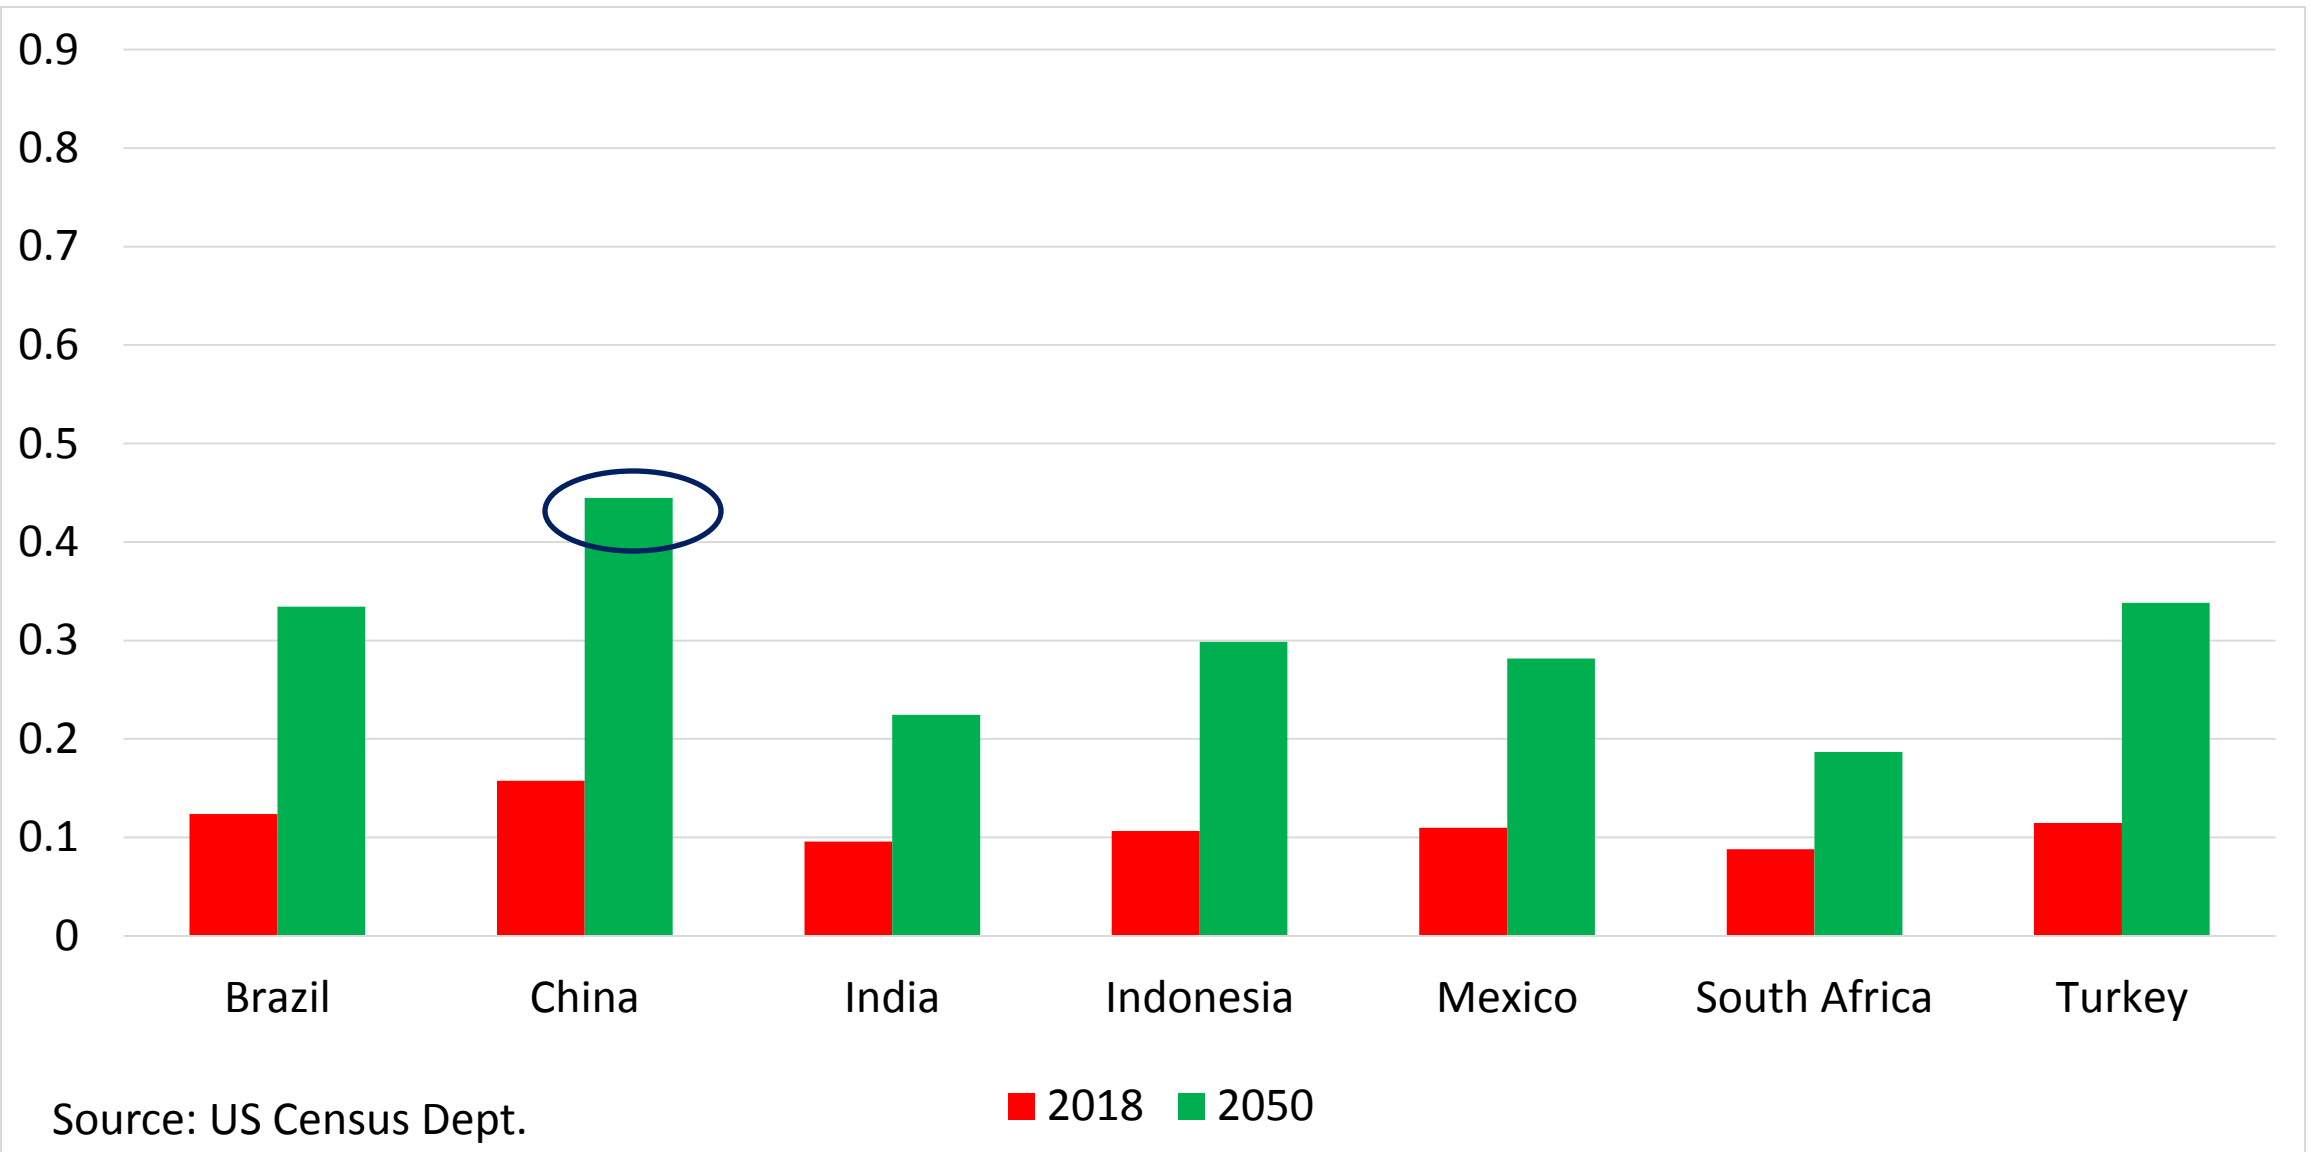

- A big problem with more developed countries, with large OADRs and generous Social Security programs
- But a growing problem in large, rapidly developing countries

# Other G-20 Old-Age Dependency Ratios

# Other G-20 Old-Age Dependency Ratios

# Many Possible Solutions and Pitfalls

# 1. Adjust Contributions and Benefits

- Most straightforward approach
- But
  - Tax increases can stifle economic incentives
  - Benefit reductions can leave retirees with inadequate retirement income

## 2. Immigration

- Reduces OADR...
- But
  - Young workers get old and must receive benefits
  - Immigrants are often lower-skilled, meaning lower contributions relative to their future benefits
  - Social tensions must be reckoned with

# 3. Funding

- A solution to the pay-as-you-go problem; each generation fully or partially supports itself
- But
  - Initial transition funding must come from current cohorts, who then must pay twice, for retirees and themselves
  - This can be avoided through government borrowing, but borrowing simply replaces implicit liabilities (to pay future retirees) with explicit ones (to pay bondholders)

# 4. Increase Retirement Age

- Basically, a benefit cut, as retirees receive benefits for fewer years
- May be a particular problem if life expectancy is not increasing uniformly

# US Male Life Expectancy at 50, by Lifetime Earnings

# 5. Substitute Private System for Public One

- May help provide workers with more retirement saving choices
  - However, requires government oversight to ensure adequate provision for retirement
  - Also, in no way a solution for imbalance between taxes and benefits for existing workers and beneficiaries
    - if private system is funded by contributions, need alternative funding for “legacy” obligations
    - If private investments yield higher rates of return, these reflect higher risk

# 6. Improve Work Incentives

- Modify benefit rules to encourage elderly who wish to work to be able to do so
  - Don't penalize decisions to continue to work; allow continued benefit receipt or accumulation of higher future benefits
- Improve linkage between contributions and future benefits, so workers do not perceive contributions as taxes
  - Adopt more transparent benefit calculations, for example through Notional Defined Contribution (NDC) schemes, which for PAYG systems still provide workers information on accruing benefit values

# Conclusions

- Demographic challenge for PAYG systems is common across leading economies and affecting emerging economies, too
- Many proposed solutions would be partially or wholly ineffective at addressing basic problems
- Ultimately, rationalization of systems will be needed, combining some realignment of benefits and taxes, along with improvements in transparency and work incentives, especially among the elderly
